

Training Opportunity: Responding to pipeline incidents

The Pipeline Association of the Northwest is offering free training to firefighters, police officers, 911 call takers and emergency responders in how to respond to a pipeline incident.

We will provide you with information about transporting a variety of products through pipelines, how to recognize a potential leak and how to appropriately respond if an incident should occur. Following a tabletop exercise, we will have an open discussion to review the outcome of the exercise and to answer any questions responders might have for pipeline operators and vice versa! Better to prepare ourselves prior to meeting at the scene of an incident and to know who to contact for further information.

RSVP required:
